Financial Programming in C++: Homework Assignment 1
Fall 2025,
MSQF, Fordham University

Manuel Balsera

Due: September 4th, 2025

1 Problem 1

The goal of the first program is to verify that you have a working compiler and that you understand how to compile and link a program.

1. Extract the source files from the zip file `HW1.zip` (available in blackboard) into a directory of your choice.

2. Compile and link an executable named `example_date`.

   The program will use the provided source files

   - `date.cpp`
   - `black_scholes.cpp`
   - `example_date.cpp`

   you must use the compiler flag `--std=c++23` to tell the compiler to use C++ 2023 standard.

3. Execute the program `example_date` and verify that the output is correct.

4. Save the program output and upload it to blackboard.
